# Honey

## WILD FLOWER HONEY

### Description

Honey is a food, usually found in a viscous liquid state and sugary, which is produced by bees from the nectar collected of flowers and processed by the digestive enzymes of these insects, being stored in combs in their hives to serve them as food.

It has nutritious and therapeutic properties that bring several health benefits. It is rich in antioxidants, vitamins and minerals. O Wildflower honey is obtained by collecting the nectar of several species of flowers and this gives it a characteristic flavor and odor, more accentuated than Orange Flowers honey and less marked than Eucalyptus honey. Its color varies from yellow to brown.

### Presentation

Classification: Wild Flowering Predominant  
Net Weight: 500g

### Conservation and Warnings

**THIS PRODUCT MUST NOT BE CONSUMED BY CHILDREN UNDER 01 (ONE) YEAR OF AGE**

Honey can vary in color, smell and taste, depending on the flowers in which the bees collect nectar. All quality honey crystallizes over time or at low temperature. To return to liquid state, place in a water bath at 45°C.

### Ingredients

Predominant flowering honey from Wild flower.

### Usage Suggestion

It can be consumed daily, 1 teaspoon or 1 tablespoon of pure honey.  
INGESTION OF HONEY IS NOT RECOMMENDED FOR DIABETICS.
